One example of crosstalk between proteins in a signalling pathway can be seen with cyclic adenosine monophosphate's (cAMP) role in regulating cell proliferation by interacting with the mitogen-activated protein (MAP) kinase pathway. cAMP is a compound

synthesized in cells by adenylate cyclase in response to a variety of extracellular signals. Yes, you got a module of Aliexpress in China that does this, but don't. The reason for our arrangement of the power lines being between the I2C wires is to stop crosstalk. ie the edges of SDA and SCL coupling together.
